

# Cheap as Chips?

**The humble spud: unsung hero of the vegetable world. Go beyond baked or mash to discover more about the mighty potato...**

**The potato** (*Solanum tuberosum*) is an herbaceous annual that grows up to 100 cm (40 inches) tall and produces a tuber, also called potato - so rich in starch that it ranks as the world's fourth most important food crop, after maize, wheat and rice. The potato belongs to the Solanaceae - or "nightshade"- family of flowering plants, and shares the genus *Solanum* with at least 1,000 other species, including the tomato and eggplant.

**Cosmic! In 1995, potatoes were the first vegetable to be grown in space....**

Potatoes are the world's most popular vegetable and have been welcomed into the cuisines of countries around the globe. Potatoes are used in curries in India and in pasta in Italy, stewed with bananas in Costa Rica, baked with rice in Iran, stuffed with liver in Belarus, stir-fried with green beans in Ethiopia, and simmered with smoked haddock in winter soups in Finland.
